# A Comparative Study of Fine-Tuning Pipelines for Integrating Large Language Models in Multimodal Data Analysis

Cătălin Grîu (c.griu@tudelft.nl) <sup>1</sup> Supervisor: Atahan Akyıldız (t.a.a.akyildiz@tudelft.nl) <sup>1</sup> Responsible Professor: Kubilay Atasu (kubilay.atasu@tudelft.nl) <sup>1</sup>Delft University of Technology

### Introduction

### Multimodal Data

- In today's data-driven environment, companies generate vast amounts of information in tables containing categorical, numeric, and textual data.
- Artificial intelligence capabilities are necessary for utilizing this data across various tasks.

### FT-Transformer

- The FT-Transformer [1] is an adaptation of the Transformer [2] architecture designed for tabular data.
- It is designed to process numerical and categorical features.

### LLMs

- Large Language Models (LLMs) [3] offer a powerful way to integrate textual data with other data types and subsequent models.
- There are numerous approaches to achieving this integration.
- An example of integrating LLMs with a graph newral network can be seen in Figure 1.

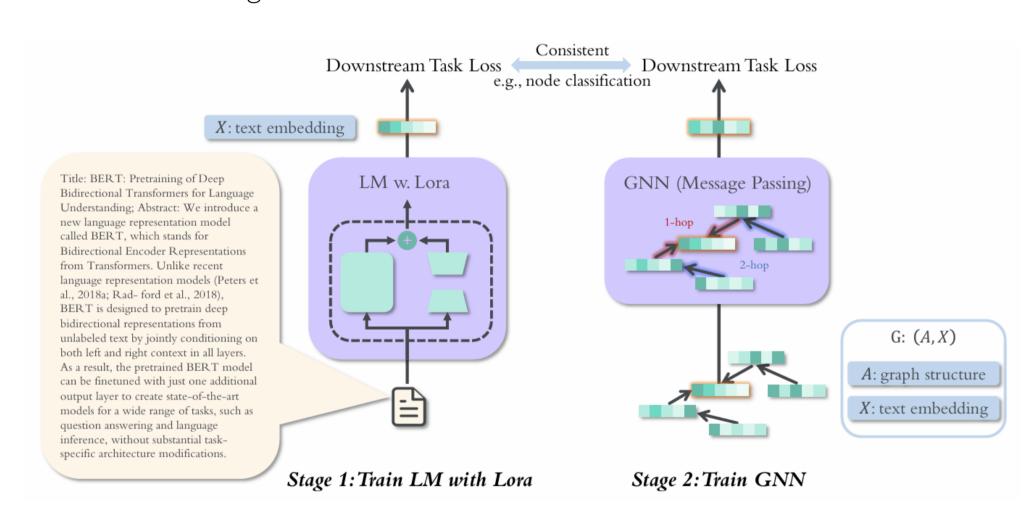

Figure 1. Combined Architecture of a LLM and a GNN. Taken from [4]

# **Research questions**

- How can we integrate pre-trained LLMs with the FT-Transformer for handling multimodal tabular data?
- Is fine-tuning the LLMs beneficial, and if so, which fine-tuning method works best?
- Should the LLM be fine-tuned separately or together with the downstream model?
- How does the size of the LLM impact both cost and performance?

# Methodology

### Combining LLM with FT-Transformer

- 1. The LLM generates embeddings for text fields.
- 2. Text embeddings are concatenated with embeddings of categorical and numerical features.
- 3. A linear transformation ensures uniform embedding dimensions if they differ in size.
- 4. The resulting matrix of embeddings is processed by Transformer layers.

### LLMs

- 1. all-distilroberta-v1 (82M parameters)
- 2. e5-mistral-7b-instruct (7B parameters)

# $\begin{bmatrix} x^{(num)} & W^{(num)} & b^{(num)} \\ 0.8 & \times & + \\ 0.1 & \times & + \\ \end{bmatrix}$ $\begin{bmatrix} x_1^{(cat)} & W_1^{(cat)} \\ B & A \\ B & + \\ \end{bmatrix}$ $\begin{bmatrix} x_1^{(cat)} & W_1^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$ $\begin{bmatrix} x_2^{(cat)} & W_2^{(cat)} \\ A & + \\ \end{bmatrix}$

### Results

Table 2. Comparison of LLM fine-tuning pipelines and their impact on downstream model performance across multimodal datasets. For each configuration: LLM - Downstream Model - Dataset, we **bold** the best and <u>underline</u> the second-best result.

LLM	Downstream Model	LLM Fine-tuning Pipeline	Amazon Fashion		OGBN-ArXiv	
			MSE ↓	Time	Accuracy ↑	Time
DistilRoBERTa	MLP	No fine-tuning	0.3087	13min	73.62	20min
		One-step (LoRA)	0.2244	5h	74.42	5.7h
		One-step (Prompt)	0.3043	4.5h	73.48	5.6h
		One-step (Full)	0.1972	5.8h	<u>74.38</u>	6.5h
		No fine-tuning	0.5379	30min	73.00	50min
	FT-Transformer	One-step (LoRA)	0.5196	6.4h	73.22	9.4h
		One-step (Prompt)	0.63	6.4h	73.24	9.4h
		One-step (Full)	0.6012	9.2h	73.22	10.7h
		Two-step (LoRA)	0.5112	5.5h + 30min	<u>73.85</u>	5.7h + 50mir
		Two-step (Prompt)	0.5704	4.5h + 30min	73.45	5.6h + 50mir
		Two-step (Full)	0.3598	5.8h + 30min	74.02	6.5h + 50mir
e5-mistral-7b	MID	No fine-tuning	0.1778	3h	76.02	20h
	MLP	One-step (LoRA)	0.1858	60h	76.79	75.7h
	FT-Transformer	No fine-tuning	0.4544	10h	75.61	20h
		Two-step (LoRA)	0.4857	60h + 3h	<u>75.18</u>	75.7h + 20h

## Conclusion

In this study, we explore the use of pre-trained Large Language Models (LLMs) combined with FT-Transformer to advance learning techniques for multimodal data. Our study highlights effective LLM fine-tuning pipelines and examines how model size influences both performance and cost, providing practical guidelines for future implementations.

- Impact of LLM Choice: Larger models, such as e5-mistral-7b, significantly outperform smaller models like DistilRoBERTa, indicating the importance of model selection in achieving superior results.
- Effectiveness of Fine-Tuning: Fine-tuning LLMs on specific datasets can significantly improve performance metrics. Both full fine-tuning and LoRA are effective methods.
- Training Method: Decoupling the fine-tuning of the LLM from the downstream model training is the most effective approach.
